

AET AT A GLANCE

American Educational Telecommunications, L.L.C., combines the latest breakthroughs in telecommunications to provide real-time healthcare and education access worldwide.

I*NET™ ...the Technology Behind the Vision

I*NET, AET's expanding global telecommunications network unites real-time intercontinental video/audio links, E-1 line Internet connectivity and communications satellite transmission technologies to deliver real-time healthcare and education to remote locations around the world. Briefly, I*NET provides:

- Reduced expense and stress in international travel for medical consultations
- Real-time access to top U.S. hospitals and the highest level of American healthcare
- Decreased hospital stays and medical expenses through early diagnosis
- Improved information exchange, connecting U.S. medical centers and research institutions with their global counterparts

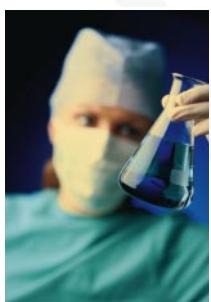

A GROWING FAMILY OF SERVICES ...for Today's Global Community

- Medical products
- Textbooks & Videos
- Web services at www.aetmedical.net

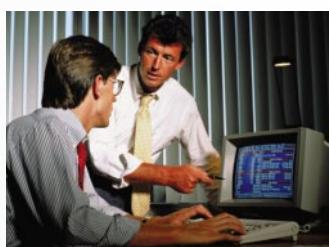

THREE SERVICE OPTIONS ...One Valuable Resource

AET's I*NET offers three clinical service options:

Routine Services—handled electronically with patient information sent to the I*NET hub for a physician to perform an analysis and report back within 24 to 48 hours.

Scheduled Consultations—arranged in advance for real-time interaction between the patient, the patient's current physician, and a U.S.-based physician specialist. The U.S.-based physician specialist will have received the patient's information in advance.

Emergency Consultations—providing real-time interaction between the patient, the patient's current physician, and a U.S.-based physician specialist with most of the patient's information being exchanged at the time of the consult.
