

Mobile Solutions for Global Telemedicine

As specialty consultants in telemedicine, AET has delivered technology solutions to local clinics, pharmacies, and medical center specialists worldwide. Our experience combined with our established relationships with multiple vendors makes us your single, reliable resource for creating a telemedicine clinic or adding telemedicine capabilities to your existing clinic, regardless of size.

Our Mobile Collaboration System enables healthcare professionals to provide remote consultations that extend the access and quality of healthcare while making its delivery more cost-effective. AET's mobile system draws on a repertoire of powerful tools to vastly enhance the quality of telemedicine.

Among these tools are AET's Onsite Mobile Devices, which combine cutting-edge on-board display, ergonomic design and exceptional ease-of-use features. Far more than a traditional patient examination camera, Onsite adds such versatile functionality as two-way voice, telestration, recording, annotation and the ability to include captured still images and video in patient records. In addition, Onsite devices are far more user friendly, allowing physicians to operate unencumbered on battery power with no power cables. These devices even provide enhanced image stability for captured still pictures.

Best of all, AET's advanced techniques and powerful tools can be brought to bear on a wide range of clinical programs and settings, including:

Patient Examinationsl
