

Your billing problems deserve a Powerful, Versatile Solution...

VersaBill

Getting bills into the right format can be time consuming and costly. But what if you could automate the whole process? Eliminate the many manual steps? What if you could completely streamline your billing in a format that meets your exact specifications while meeting the needs of your customers? You can. It's easy. Thanks to VersaBill, the automated new bill formatting system from Recurrent Software Solutions.

Fully Automated

Once VersaBill is set up correctly, everything is automated using EDI—for fast, efficient network data transfers. You simply place the bill on an FTP site (yours or ours) to which we have access. When we find a bill file, we will process it and send it out. If you or your customer have validation tables or conversion tables that you want us to use or maintain, we

will create a web page to handle the maintenance (add, modify, delete) of those tables.

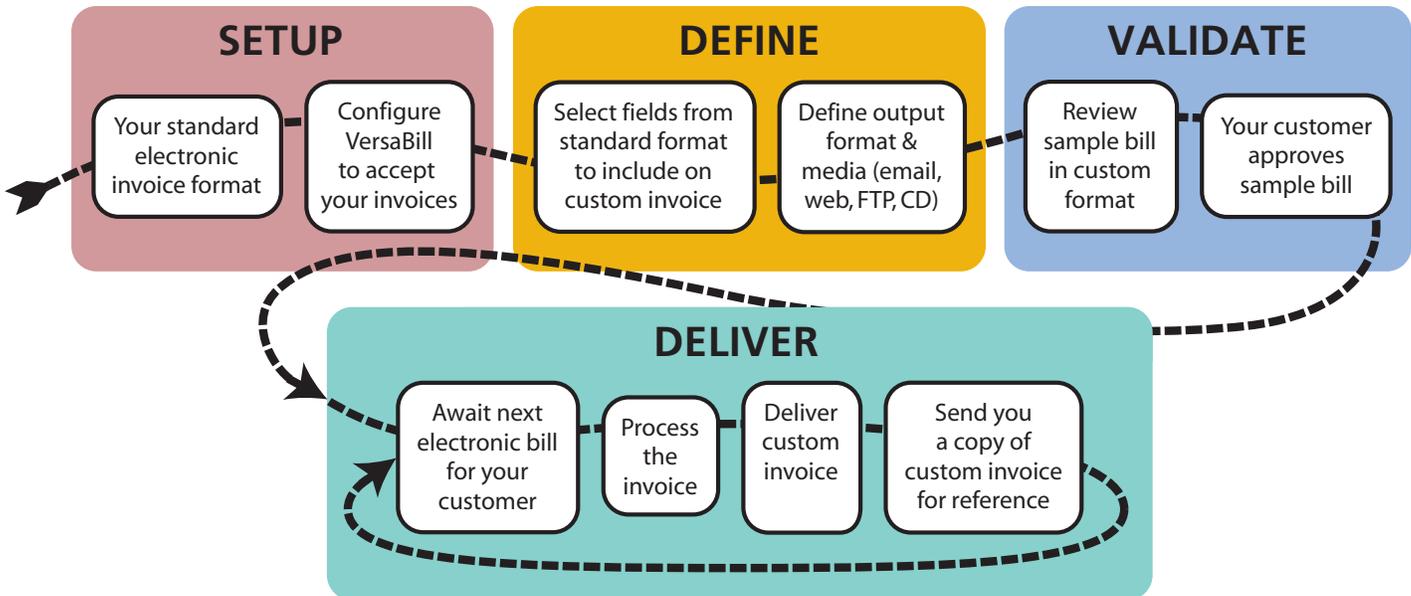

From simple to complex...

VersaBill is a model of versatility

VersaBill transforms your standard electronic bills and reformats them to the exact specifications demanded by your customers. Here are just some of the ways we can reformat your current electronic bill:

- Produce an old unsupported format for you if you don't need additional new information and don't want to change your software.
- Produce a text file in a format specified by your customer who may need all bills submitted to them in a format they specify.
- Produce an Excel spreadsheet with specified fields.
- Split up your bill exactly the way you specify and submit this detail to a web site.

VersaBill Flow Chart

Getting Started is Easy

Typically, you would send us a document defining your standard electronic format. We would then use VersaBill to create code to parse this format for use with all your customers. For each of your new customers, you would send us a document that describes the fields your customer wants, where your customer wants them, and what you want us to do with this information. After we set this up, we would perform manual tests with you.

Thoroughly Validated Results

To ensure accuracy, VersaBill involves you and your customer in the process. After testing, data goes to you for validation. If we produce the files, they are checked. You tell us the out-

put file format and the media you use to send it to your customer (email, web, ftp, CD, etc.). If we submit over the web, we'll perform the test submissions and have your customer validate what they see at their end.

Files sent by email are first "test emailed" to you then, if requested, to your customer. Once the format is approved and signed off, we place you into the automated system and await a file on the ftp site. After processing your automated file, a copy of the data we send out to your customer is returned to your ftp site, so you have a record of what we sent out. In addition, any email that gets sent out to your customer is copied to someone in your organization. No matter how we get a file to your customer, we will ftp a copy back to you. VersaBill handles all the details.
